

**OAKLAND UNIFIED
SCHOOL DISTRICT**

Community Schools, Thriving Students

February 5, 2018

Dear School Community:

As part of a proactive effort to address potential health threats to students and staff, our school site was tested once again for the presence of lead in drinking water. The District is testing for lead in consumable water at all school sites and child development centers and remediating issues as they are identified. This time, the East Bay Municipal Utility District tested water on our campus. This is secondary testing that is free to the District, which we expect to provide greater peace of mind to our school community.

These secondary results are in. **We are pleased to report that there were no elevated levels of lead found in the fixtures on our campus.** The results from our school fall within acceptable Environmental Protection Agency (EPA) guidelines for drinking water.

The safety and well-being of students and staff is our top priority. As always, please contact us with any questions or concerns. For more information about water quality in OUSD, please visit www.ousd.org/waterquality.

Sincerely,

Staci Ross-Morrison Josue Diaz
